

CEO General Statement

NNT was formed in 2005 and has since grown to include a group of companies incorporated in both the United Kingdom and the United States, with physical operations located in Europe, North America and Asia.

The mission for NNT has always been to create market leading solutions, that deliver considerably more value to our customers than the competitive options.

NNT remains a privately held entity and we are very proud of the fact that we have managed our incredible growth journey without leveraging a line of credit or in fact any form of debt whatsoever.

Our solid and independent footing affords us with the luxury of being able to make the right decisions for the overall benefit of our customers, staff and NNT in general, without the pressure of debt or the potentially misguided corporate demands that continue to affect and govern many of our competitors.

Since its launch NNT has grown at a rate of 30% year on year with a recent increase to 40% following the highly successful release of our Gen7 R2 product range. In addition, 70% of NNT's income is now based on a recurring revenue stream.

The best endorsements always come from our customers who already trust NNT technology. Across the world we currently protect over 100,000 critical servers on behalf of organizations such as IBM, Conduent, DXC Technologies and the US Army.

NNT was recently awarded the highest possible financial credit, safety and risk profile of 100%. This is the result of strong financial leadership combined with an exemplary trading history.

The quality legacy that we continue to build starts with the commitment we have to our Customers and Staff.

We ensure that every member of the NNT team has the right tools and training as well as an exemplary working environment and a culture of total support to fuel growth at every level. This in turn leads to exceptional customer service and loyalty.

3rd party referrals and recommendations from current customers remains one of the biggest lead generators for NNT.

The future for NNT has never been more exciting. We are investing in and exploring new innovative areas of technology as well as making ongoing enhancements to our service facilities and product features. Our continued accredited adoption of best practices in cyber security and operations, combined with strong innovations in the area of change control, should reassure anyone considering NNT for their important cyber and operational initiatives.

At the time of writing we believe NNT to be the only vendor within our particular space able to provide the scope of features and breadth of support underpinned by such a reassuring and controlled financial position. This is evidenced by the vast number of incredible case studies and competitive replacement projects that NNT has successfully completed in recent years.

I am happy to make myself personally available to any of our customers, partners or prospects that might be interested in hearing more about our exciting plans for the future or indeed our financial profile.

Mark Kerrison

Chief Executive Officer

About NNT

New Net Technologies (NNT) is the leading provider of SecureOps™. SecureOps™ combines the essential, foundational security controls as prescribed by all leading security frameworks such as CIS and NIST with the operational discipline of change management. By ensuring you have the prescribed essential security controls in place combined with the ability to correlate changes within your environment with an approved ticket or set of intelligent rules, organizations are able to prevent and protect themselves against all forms of breach as well as gaining full control of changes for both security and operational peace of mind.
